

WORK EXPERIENCE

Senior Software Engineer (IC-3)	ServiceNow, Inc.	March 2026 – Present
- Leading the development of AI Response Assist – an AI-powered feature bringing AI intelligence to the full assessment lifecycle. 🔗 Official Demo. - Architected a RAG-based AI suggestion engine using E5-embedding-based semantic matching, a ranking algorithm, and LLM integration. - Building a document intelligence pipeline with knowledge-grounded response generation surfacing answers from linked documents. - Designed end-to-end backend flow: transaction management, REST API layer, multi-LLM prompt post-processing and multilingual support.		
Software Engineer (IC-2)	ServiceNow, Inc.	March 2024 – February 2026
- Owned and delivered multi-contributor support in the Smart Assessment Engine, enabling collaborators to work together seamlessly. 🔗 Docs. - Implemented real-time synchronization so that changes are instantly reflected across users, with presence indicators of active collaborators. - Delivered key features like Conditional Visibility and Preferred Answers for Smart Assessment Engine, enabling a successful GA launch. 🔗 Docs. - Designed and developed a no-code Condition Builder Framework and evaluation engine powering key features. - Developed a low-code Rule Engine, automating actions like emails and approvals, enabling workflow automations linked to Smart Assessments. - Collaborated with stakeholders to define roadmaps and align features with business goals, impacting 10+ teams.		
Associate Software Engineer (IC-1)	ServiceNow, Inc.	July 2022 – February 2024
- Designed the Autosave feature for Risk Assessments, including REST APIs, UI enhancements, and a WebSocket-based refresh mechanism. - Reduced the average number of clicks required to complete a risk assessment by 60%, from ~200 to ~80. 🔗 Docs. - Owned the end-to-end epic to enhance the configurability of Risk Assessments. Increased user adoption by ~15% post-release – 🔗 Docs. - Contributed to the development and optimization of usage tracking and licensing for the Governance, Risk and Compliance App ecosystem. - Achieved WCAG2.0 compliance, by fixing 15+ issues to ensure compatibility with screen-readers, screen-magnification, and high-contrast modes.		
Software Engineer Intern	Amazon.com, Inc. (Amazon Pay)	January 2022 – June 2022
- Productionized a proof-of-concept of the selection safelisting feature in Amazon's internal GraphQL service. 🔗 Certificate. - Drafted a low-level design document for the safelisting module, and its integration with the existing service, while ensuring no code duplication. - Created shared utility classes in Java to avoid duplication of similar code between the selection safelisting and persisted queries modules. - Implemented the low-level design in Java with 100% code coverage through unit tests implemented using JUnit and Mockito.		
Software Engineer Intern	ServiceNow, Inc.	May 2021 – July 2021
- Designed and developed a proof-of-concept for a feature to visualize and manage hierarchical entity relations in a database. - Created a Web Component using an internal UI framework and the D3.js library, to visualize hierarchical entity relations in a tree-like fashion. - Implemented a drag-and-drop based graphical interface to modify entity hierarchies in a user-friendly manner. - Created REST APIs to fetch the hierarchical data by performing recursive queries to the DB, and persist the user updates to the DB.		
Summer Intern	Infibeam Avenues Ltd.	May 2019 – July 2019
- Implemented an AI Chatbot application using Django, PostgreSQL and Dialogflow API to conduct interviews. 🔗 Certificate. - Designed an E-R model for a relational database to store interview questions and user responses. Implemented it in PostgreSQL.		

EDUCATION

Birla Institute of Technology and Science, Pilani – K. K. Birla Goa Campus	August 2017 – June 2022
Bachelor of Engineering (B.E.), Computer Science	CGPA: 8.90 / 10
Master of Science (M.Sc.), Physics – Integrated Dual Degree	

SKILLS

Languages	JavaScript, Java, C++, Python, SQL, GraphQL, HTML, CSS
Frameworks	React JS, Node JS, REST APIs, WebSocket, WebComponents, Django, ServiceNow, Git

RESEARCH

The Neutron Star Outer Crust Equation of State: A Machine Learning Approach Research Project at BITS 🔗 Publication	January 2022
- Lead author of the publication in The Journal of Cosmology and Astroparticle Physics, January 2022 Edition. - Proposed a novel approach to iteratively train models on residual errors, to minimize errors on binding energy predictions.	
Time Series Modelling of the Indian Stock Market: A Machine Learning Approach Master's Thesis at BITS 🔗 Thesis	December 2021
- Analyzed and implemented several machine learning solutions for modelling time-series data of NIFTY50 index. - Devised a Stacked-generalization based approach using a neural network meta-learner to decrease RMS errors of traditional ML models.	

PROJECTS

2048 Game Clone for Desktop Python, Tkinter 🔗 GitHub	January 2021
15-puzzle solver using A-star search algorithm with Manhattan distance heuristic Python 🔗 GitHub	January 2021
